

# 5 x 7.5 Flipbook – Measurements and Directions – pg 1

Lea Millora Sanders for Zutter Innovative Products – Bind-it-All Design Team

Cardstock base – You will need 3 bases for each set of “flipbook” pages.

Patterned paper panels – You will need 10 of the smaller and 4 of the larger panels

When you see these, fold the base at the crease and punch with the Bind-it-All

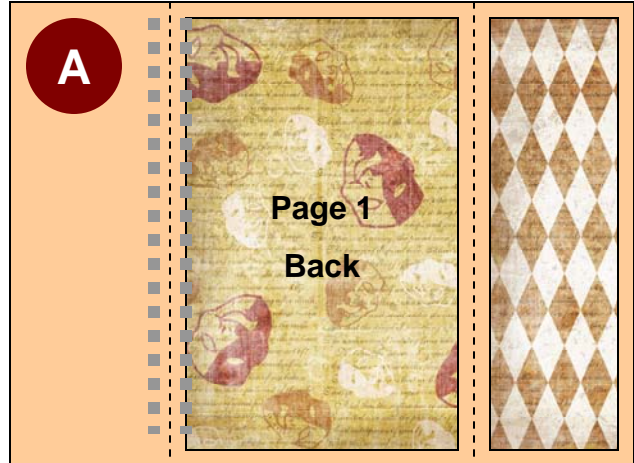

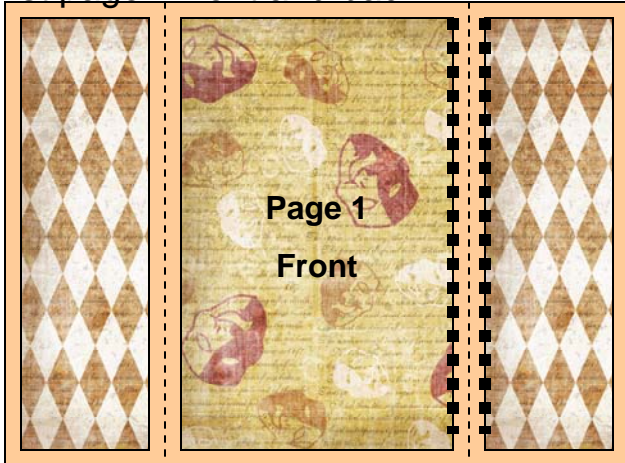

- Cover two 5" x 7.5" clipboard covers with patterned paper or decorate/embellish as you wish. Punch the lengths of both covers and set aside.
- Cut 3 cardstock bases and crease as shown (see topmost graphic on this page).
  - NOTE: The cardstock bases are purposely made a little short of the 5" measure (when folded) to compensate for the creasing. Once the cardstock bases are creased, the total width will expand past the 4.75" measure. If you prefer to work with whole measurements and don't mind if your pages peek out from under the covers, use (2.5", 5", 2.5" for the base and adjust the patterned paper panels to 2.25", 4.75", 2.25" )
- Cut 10 small and 4 large patterned paper panels (see middle graphic on this page) and adhere according to the specs (on the next page).
- Punch each of the cardstock bases as indicated on the specs making sure you line up with the punches on the clipboard covers. Ensure you fold your cardstock where it is creased and punch through both layers.
- Adhere A to A and B to B as shown on the specs (next page).
- Make as many of these flip pages as you would like for your book.
- When you have as many pages as you'd like, combine the pages with the covers and bind.
